To whom it may concern:

I am a Full-Stack Developer with a Bachelor of Science in Software Engineering and a minor in Mathematics from San Jose State University. I recently completed a certificate in Full-Stack Web Development from the University of California, Berkeley Extension. My recent certificate added new web development skills to my Object-Oriented Programming experience such as Mongo, Express, React, and Node.

My experience in hospitality has given me the ability to communicate my thought process with peers easily and to understand the significance of teamwork and collaboration. My current position as a FS Web Development tutor and teaching assistant at Trilogy Education strengthens my ability to think creatively and analytically regarding any given programming obstacle. There I help students push through obstacles and concepts with my main job being that the student can understand me and that they have the tools to solve similar problems on their own.

One of the projects that I am working on is a full stack web application for a local bakery using the MERN stack. The application allows users to look at what the bakery is all about and what they have to offer. Users can contact the bakery and request an order for delivery at a specific date and time. The application gives the user a shopping experience as they browse through menu items and are able to modify their order through a shopping cart. I use React to develop the application's different reusable components like menu items and the navigation bar. I use MongoDB to store the bakery's menu and coordinate the deliveries. I use Firebase for user authentication.

I am passionate about problem-solving, learning new technologies, and developing user-friendly applications. I look forward to using my technical abilities and Software Engineering skills to create user-friendly experiences. The attached resume further explains the course work and work experience that I mastered in recent years. I am look forward to personally discussing how my skills and experience will contribute to the development team. Thank you in advance for your consideration.

Sincerely,
Carlos Toledo
